Amendments to the Specification:

Please replace the paragraph beginning at page 33, line 8 with the following rewritten paragraph

After acknowledging receipt of the selected game outcome seed, the gaming terminal utilizes the selected game outcome seed to generate one or more game numbers as indicated by block 218. In one embodiment, the gaming terminal utilizes the selected game outcome seed in a random number generating algorithm to generate at least one and preferably a plurality of random numbers. The gaming terminal then uses the generated random numbers to determine the game numbers.

Please replace the ABSTRACT OF THE DISCLOSURE paragraph beginning at page 63, line 2 with the following rewritten paragraph:

A central determination gaming system with a keno game. ~~In one embodiment,~~ ~~u~~Upon a player initiating a game play at ~~one of a~~ ~~plurality of~~ gaming terminal~~s~~, the gaming terminal enables the player to select a plurality of symbols. The gaming terminal ~~then~~ accesses a standard set of predefined symbols for the specific game played. The gaming terminal bidirectionally maps the player's selected symbols with the standard set of predefined symbols. The gaming terminal ~~then~~ receives a predetermined game outcome seed from a central controller. ~~The central controller~~ ~~selects the game outcome seed from a set or pool of game outcome seeds, marks or~~ ~~flags the selected game outcome seed in the pool as used or unavailable.~~ The gaming terminal ~~then~~ utilizes the selected game outcome seed to generate a plurality of game symbols. The gaming terminal determines if each of the generated game symbols needs to be modified. If so, the gaming terminal modifies these generated game symbols based on the bidirectionally mapping, presents the modified game symbols to the player and provides the player a game outcome that is determined based on the selected game outcome seed.
